

Trip to the CAVE

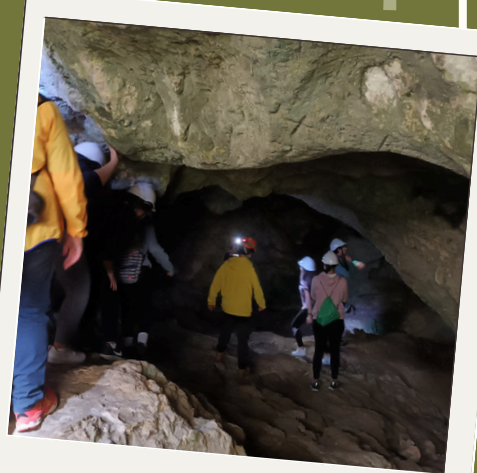

THE WAY

To access the cave we had to follow a path up the mountain

ARRIVAL

Once we arrived at the cave they explained what we were going to perform, and gave us the necessary material, both receivers and helmets and lanterns.

EXPLORATION

The first thing we did was to do an exploration where they explained the formation of the cave, its fauna and its flora.

COLLECTION OF SENSORS

Later, once explored the cave we picked up the sensors, which were hidden in various points of this; one at the entrance and another in the innermost area.

FAUNA AND FLORA

After, we were observing the fauna and flora, made several photos and finally extracted small samples of those that we found more interesting before.

PLACING OF THE NEW SENSORS

Finally, we place the new sensors in the same places from which we extracted the others.
