

ANALYSIS AND RESULTS

Sample collection

When we were in the cave, we collected some samples like plants or mosquitoes to analyze later in the laboratory.

Sample analysis

The samples we collected in the cave were analyzed in the laboratory using microscopes. We also identified the names of each mosquito or plant.

Temperature analysis

Thanks to the sensors we had inside the cave, we were able to monitor it and see the temperature changes between previous years and this year.

Results

When comparing this year's temperatures with those of previous years, we can see that they have slightly decreased.
In the caves, we found unique fauna and flora.
